The Star Trek franchise has always touted its aim to be boldly go where no one has gone before and, by and large, it has done an impressive job of living up to that promise over 50 years of a television series, movies, video games, and comic books. JJ Abrams' 2009 reboot broke new ground by telling a fresh story and a new action-packed continuity for the franchise, only to fall back on familiar themes in 2013's Star Trek Into Darkness, which effectively recycled the plot of Star Trek II: The Wrath of Khan. Now, with Abrams' exit and the arrival of Fast and Furious franchise director Justin Lin, Star Trek Beyond steers toward new territory once again but will audiences like where it's headed? Directed by Lin from a script penned by Doug Jung (Dark Blue) and Simon Pegg (who plays Montgomery Scott in the film), Star Trek Beyond has Chris Pine's ever-confident James T. Kirk and the USS crew investigating an incident in unexplored space, only to be ambushed by the alien mortal Krall (as Emmy-nominated Luther star Idris Elba played) and stranded on a wild and dangerous planet. Basically, Beyond is a very different kind of Star Trek adventure. Although it starts slowly, it doesn't take long for Lin's sensitivities to be easy to take control. Filled with fast-paced sequences, fantastic set pieces and an impressive amount of destruction, the film is quickly set as the most frenzied Star Trek film so far, backed by a scenario that threatens life to the next with only the occasional pause to breathe. Its frenetic rhythm does not lend itself to a lot of character development, but after two films in the current career and 12 films in general, Beyond supposes that the public knows everything he needs to know about the characters. In Beyond, Lin's quick and furious trick to create moody shows is in full display, and he clearly reveals in the great reach that Beyond offers him as a filmmaker. Whether the camera is chronicling a deep battle or a high-speed chase through the label of a giant space station, Lin manages to find the sweet spot between the interactions of his characters between himself and the madness of what is happening around him. The new cast seems more than comfortable to slip back into their roles as the crew of the famous starship, and with every delivery of the franchise they feel a little less like younger replacements for William Shatner, Leonard Nimoy, and the rest of the classic Star Trek cast and more like the established and modern faces of their iconic characters. Sadly, the specter of the recent death of actor Anton Yelchin looks great on the film. Yelchin, whose character Chekov plays a remarkable expanded role in Beyond with the last two films, it serves as a reminder of what the franchise lost when he died. More is a very different type of adventure Star Trek. The new cast of characters is increased by the recipient arrived Jaylah, an alienide that Sofaa Boutella plays. Boutella, who first caught the attention of the public as the murderer without mercy Gazelle in Kingsman: the secret service, continues to justify his status as a rising star in Star Trek Beyond. He has given him more responsibility with every role he has taken in his short career, and his performance at Star Trek Beyond certainly does nothing to hurt his chances of playing a more important role in his next project. However, the general lack of development of the movie's character charges his toll, especially in his villain. Maybe Lin or writers were uncertain about how to drive Elba as Krall, but he is given much less time to become a memorable nemesis for Kirk and his team. The lack of attention in Kall is particularly notable in comparison with how much time was building the khan of Benedict Cumberbatch in Into Darkness, and it is a pity that an actor as talented as Elba did not give the opportunity to chew the landscape a little more. Then again, Beyond manages to be much less dreary than the last delivery of the franchise. Although it does not have a great impact on the quality of the movie, Star Trek Beyond also presents one of the masters badly defined in the history of Star Trek. (It would be a spoiler reveal exactly what it is). The evil established Macguffin is symptomatic of some of the other defects in Beyond, and Lin is occasionally based on the sequences of firing action to distract from a thin plot that could have benefited from more attention. Lin is a filmmaker who stands out in what he does, flying things (and people) through the screen, and his creative team clearly played his strengths. Star Trek Beyond could have been a more enjoyable movie. The film benefits from a straightforward script that fits his rapid-fire approach. More than anything else, Star Trek Beyond represents a significant departure from the approach Abrams took with his take on the franchise. It proves that Star Trek can dish out action sequences as well as any sci-fi franchise, and that Star Trek feels most at home going boldly where the franchise hasn't gone before. Editors' Recommendations Photo Courtesy: Columbia Pictures/IMDb No matter how much distance you put between the past and the present, there always seems to be more than a few famous faces that resemble the iconic looks of the stars of yesteryear. From singers to actors to everything in between, there's plenty of similarities. In some cases, these similarities are more than just passing resemblances. Take a look. Harry Styles and Mick Jagger Former One Direction band member-turned-solo act Harry Styles and iconic Rolling Stones frontman Mick Jagger share a lot more in common than the simple fact that they're both famous for rocking in an all-male band. Despite being of absolutely no relation to one another, the two are quite similar-looking. Photo
